TROUBLESHOOTING

If the documents on this CD-ROM catalog don't appear to be printing correctly, you may need to adjust the driver settings for your printer. The most common circumstance requires this adjustment when using a PCL printer.

The changes you make should be to the way your printer prints fonts and graphics. Set your printer to use raster graphics rather than vector graphics and bitmap fonts instead of outline fonts. If the bitmap option isn't available, it may say to print fonts as graphics. This means the same thing.

Additional suggestions are under the Acrobat Online Guide accessible through the Help menu.
